

## June 19-25, 2022, IPM Report

### **Trap Counts**

Bollworm Moth Trap

Shoffner- 1000

Six Mile Lane-350

Mack- 600

Tuckerman- 900

SWCB

Mack-2

Shoffner-2

Blackville-2

Pasture

Armyworm-0

Bermuda Stem Maggot- 0

### **Disease Alert:**

NO New Disease Concerns this week

### **Weed Alert:**

A lot of calls about salvage control programs in Rice

Check MP44 for Rates and Specifics

Ricestar HT + Regiment (Conventional Rice)

24 + 0.63 oz/A. Use recommended adjuvants according to Regiment label

Ricestar HT + Beyond/Postscript 24 + 5 oz/A. (Clearfield/Fullpage)

Cutoff In Rice for certain herbicides is PI (panicle initiation), Joint Movement, Half Inch Internode, and/or PHI Post Harvest Interval. Refer to MP44 or contact the county agent.

### **Soybean Weed Control**

Enlist system- We find that Enlist One + Liberty does a much better job suppressing Sedges in Enlist Soybeans than RoundUp alone. We usually will comeback in 7-14 Days with RoundUp/Liberty.

Concerns going into this week. WATER WATER WATER. We are dry and unless we have significant rainfall we will start struggling with pollination in corn and other flowering crops. Try your best to not let a field wilt during reproductive stage. You more than likely will not be able to make up that yield loss.
