

September Catch Up

Traps

Numbers have fell below reportable number for the past 2 weeks. As always for Bollworm/Earworm we see them usually into Mid-Late September on late soybeans.

Insects

No signs of a Red Banded Stink bug in the area, but I have still had fields at treatable threshold for Brown and Green Stink Bugs at R5 Growth Stage.

Disease

Target Spot is out there but I have not confirmed any to be treatable in Cotton or Soybeans in Jackson County. \
