

# Wheat Update 2022

## ARKANSAS WHEAT PERFORMANCE TRIALS AND VARIETY SELECTION

DR. JASON P. KELLEY  
Professor  
Wheat and Feed Grains  
Extension Agronomist

JOHN CARLIN  
Director Arkansas Crop  
Variety Improvement Program

ROBYN MORGAN  
Program Technician

RICHARD BOND  
Program Associate

DAVID MOON  
Program Associate

DR TERRY SPURLOCK  
Associate Professor  
Extension Plant Pathologist

Wheat performance trials were conducted during the 2021-2022 growing season by the Arkansas Wheat Variety Testing Program under the direction of John Carlin to provide information about yield potential, agronomic characteristics, and disease reaction of commercially available and experimental lines/varieties of wheat. Variety selection is very important for successful and profitable wheat production. This publication is a summary of the Arkansas Wheat Variety Testing Program results from 2022, along with 2 and 3-year average yields from commercially available varieties and is designed to help producers select adapted, high-yielding, and disease-resistant varieties.

**FIGURE 1. LOCATIONS OF ARKANSAS WHEAT PERFORMANCE TESTS**

- 1 – Northeast Research and Extension Center, Keiser – Sharkey Silty Clay/Steele Complex
- 2 – Lon Mann Cotton Research Station, Marianna – Calloway Silt Loam
- 3 – Vegetable Substation, Kibler – Roxana Silt Loam
- 4 – Pine Tree Research Station, Colt – Calloway Silt Loam
- 5 – Southeast Branch Station, Rohwer – McGehee Silt Loam

### Methods

Wheat varieties and experimental lines were entered by seed companies and public institutions and evaluated for an unbiased comparison of their performance. In general, recommended cultural practices for wheat production in Arkansas were used. All locations were planted between October 15 and November 6 into conventionally tilled seedbeds using small plot planters.

Each trial consisted of 66 varieties and experimental lines replicated four times in a randomized complete block design. A seeding rate of 105 lb/A was used for all varieties at each location. Recommended production practices were followed, and pests were controlled as needed. Plots were harvested with a small plot combine to determine yields, which were adjusted to 13 percent moisture.

For further details concerning methods and detailed results from performance trials, consult the *Small-Grain Cultivar Performance Tests 2021-22*, Arkansas Agricultural Experiment Station, located at: <https://aaes.uark.edu/variety-testing/>
