

Medicated Feed Additive Serial Dilutor Calculator Guide

Prepared by Shane Gadberry, Professor – Animal Science

The **Medicated Feed Additive Serial Dilutor Calculator** is an educational tool for calculating the quantity of a medicated feed additive for a feed group and applying a one, two, or three step sequential dilution to achieve a more manageable feed mixing and delivery rate.

1. Enter the Target Medicated Feed Intake and rate (Drop-Down Menu) as either mg/animal or mg/lb weight.

<p>Target Medicated Feed Intake</p> <input style="width: 90%;" type="text"/>	<p>Select from Drop-Down Menu</p> <div style="border: 1px solid black; padding: 2px; display: flex; justify-content: space-between; align-items: center;"> mg/animal ▼ </div>
---	--

2. Herd and Feed Inputs
 - a. Enter the Number of Animals (animals) in the feeding group.
 - b. Enter the Average Size (lbs/animal) of animals in the feeding group.
 - c. Enter the Total Daily Supplemental Feed Rate (lb/animal).
 - d. Enter the Target Batch Mix Size (lb).
 - e. Enter the Concentration of the Medicated Feed Article (g/lb) as stated on the label.

Herd and Feed Inputs

<p>Number of Animals in the Feeding Group <input style="width: 60%;" type="text"/> animals</p>	<p>Target Daily Supplemental Feed Rate <input style="width: 60%;" type="text"/> lb/animal</p>
<p>Average Size of animals in the feeding group <input style="width: 60%;" type="text"/> lbs/animal</p>	<p>Total Daily Supplement Feed for the Group <input style="width: 60%; text-align: center; value: 0;" type="text"/> lb/d</p>
<p>Target Daily Medicated Feed Intake <input style="width: 60%;" type="text"/> mg/animal</p>	<p>Target Batch Mix Size <input style="width: 60%;" type="text"/> lb</p>
<p>Dose Per Unit of Animal Weight <input style="width: 60%; text-align: center; value: 0;" type="text"/> mg/lb</p>	<p>Number of Days Feeding Per Batch <input style="width: 60%; text-align: center; value: 0;" type="text"/> days</p>
<p>Concentration of Medicated Feed Article <input style="width: 60%; text-align: center; value: 0;" type="text"/> g/lb</p>	

3. Dilutions - Up to 3 serial dilutions are available (Dilute 1, Dilute 2, and Dilute 3). For dilute 1, enter the pounds of concentrated medicated feed from the bag to be mixed with a non-medicated feed of similar particle size to achieve the first level of dilution. A one-to-one dilute for example will reduce the medicated feed concentration by 50%. For Dilute 2, the medicated feed from Dilute 1 is further diluted with a non-medicated feed to achieve an even more diluted form of a medicated feed mix. The Dilute 2 mix can be further diluted to achieve Dilute 3 mix. Subsequent dilution amounts of a medicated feed should not exceed previous dilution total.

Dilute 1		Dilute 2		Dilute 3	
Amount of concentrated medicated feed	<input type="text" value="1"/> lb	Amount of DILUTE 1 Medicated Feed	<input type="text" value="1"/> lb	Amount of DILUTE 2 Medicated Feed	<input type="text" value="1"/> lb
Amount of non-medicated feed supplement for dilution	<input type="text" value="1"/> lb	Amount of non-medicated feed supplement for dilution	<input type="text" value="1"/> lb	Amount of non-medicated feed supplement for dilution	<input type="text" value="1"/> lb
Concentration of Final Dilute 1 Medicated Feed	<input type="text" value="0.000"/> g/lb	Concentration of Final Dilute 2 Medicated Feed	<input type="text" value="0.000"/> g/lb	Concentration of Final Dilute 3 Medicated Feed	<input type="text" value="0.000"/> g/lb
Total Amount Dilute 1	<input type="text" value="2"/> lbs	If the total amount of Dilute 1 is used to make Dilute 2, available Dilute 2 =	<input type="text" value="4.000"/> lbs	If the total amount of Dilute 1 is used to make Dilute 2 and the total amount of Dilute 2 used to make Dilute 3, available Dilute 3 =	<input type="text" value="8.000"/> lbs

4. Mixing Summary - Determine which option [Option 1 (full strength), Option 2 (Dilute 1), Option 3 (Dilute 2), or Option 4 (Dilute 3)] is most practical to blend with the final non-medicated feed for daily feeding.

Mixing Summary					
Calculated Concentration of Medicated Feed Per Batch		<input type="text" value="0"/>			mg/lb
Quantity that would be needed per		<input type="text"/>			lb batch mix
Mixed Feed Options	Medicated Feed Lbs.		Non-Medicated Feed Lbs.		Total Feed Lbs.
Option 1 Fully Concentrated Medicated Feed Article	<input type="text" value="0.000"/>	+	<input type="text" value="0"/>	=	<input type="text"/>
Option 2 Dilute 1 Medicated Feed Mix	<input type="text" value="0.000"/>	+	<input type="text" value="0"/>	=	<input type="text"/>
Option 3 Dilute 2 Medicated Feed Mix	<input type="text" value="0.000"/>	+	<input type="text" value="0"/>	=	<input type="text"/>
Option 4 Dilute 3 Medicated Feed Mix	<input type="text" value="0.000"/>	+	<input type="text" value="0"/>	=	<input type="text"/>
*Choose the number of dilutions for a final mix option that is most accurate and practical.					

5. Unit Converter - convert medicated feed options from pounds to either ounces or grams for weighing and mixing.

Example 1.

The objective is to provide **200 mg per animal** of a medicated feed additive to **60** stocker steers weighing **550 pounds** that will be supplemented at **5.5 lbs supplement per calf**, daily. A total of 2,000 lbs feed will be mixed per feed batch.

The label of the medicated feed purchased indicates **90 grams (g)/lb** active ingredient.

Using a series of 3 dilutions at a 1:2 dilution rate, dilution 1 would have a concentration of 30 g/lb, dilution 2, 10 g/lb, and dilution 3, 3.333 g/lb.

The calculated concentration of medicated feed per batch is 36.364 mg/lb for each of the 4 blending options. Multiplying the medicated feed 36.364 mg/lb x 5.5 lb/animal daily feeding rate equals the target 200 mg/animal.

Blending option 1 would require 0.808 lb of the concentrated medicated feed added to 1999.192 lb non-medicated feed to get to the final 2000 lb batch size.

Blending option 4 would require 21.821 lb of the 3rd Dilution Level added to 1978.179 lb feed to get to the final 2000 lb batch size.

If starting with 1 lb of concentrated medicated feed in Dilute 1 and using a 1:2 dilution ratio for Dilute 1, Dilute 2, and Dilute 3, the final Dilute 3 would yield 27 lbs of a 3.33 g/lb medicated feed mix. If Dilute 3 is used to produce Option 4 feed mixing, there would be 5.179 lb Dilute 3 remaining after mixing 1 2,000 lb feed batch.

Dilute 1		Dilute 2		Dilute 3	
Amount of concentrated medicated feed	<input type="text" value="1"/> lb	Amount of DILUTE 1 Medicated Feed	<input type="text" value="1"/> lb	Amount of DILUTE 2 Medicated Feed	<input type="text" value="1"/> lb
Amount of non-medicated feed supplement for dilution	<input type="text" value="2"/> lb	Amount of non-medicated feed supplement for dilution	<input type="text" value="2"/> lb	Amount of non-medicated feed supplement for dilution	<input type="text" value="2"/> lb
Concentration of Final Dilute 1 Medicated Feed	<input type="text" value="30.000"/> g/lb	Concentration of Final Dilute 2 Medicated Feed	<input type="text" value="10.000"/> g/lb	Concentration of Final Dilute 3 Medicated Feed	<input type="text" value="3.333"/> g/lb
Total Amount Dilute 1	<input type="text" value="3"/> lbs	If the total amount of Dilute 1 is used to make Dilute 2, available Dilute 2 =	<input type="text" value="9.000"/> lbs	If the total amount of Dilute 1 is used to make Dilute 2 and the total amount of Dilute 2 used to make Dilute 3, available Dilute 3 =	<input type="text" value="27.000"/> lbs

Mixing Summary			
Calculated Concentration of Medicated Feed Per Batch	<input type="text" value="36.364"/> mg/lb		
Quantity that would be needed per	<input type="text" value="2000"/> lb batch mix		
Mixed Feed Options	Medicated Feed Lbs.	Non-Medicated Feed Lbs.	Total Feed Lbs.
Option 1 Fully Concentrated Medicated Feed Article	<input type="text" value="0.808"/>	+ <input type="text" value="1999.192"/>	= <input type="text" value="2000"/>
Option 2 Dilute 1 Medicated Feed Mix	<input type="text" value="2.424"/>	+ <input type="text" value="1997.576"/>	= <input type="text" value="2000"/>
Option 3 Dilute 2 Medicated Feed Mix	<input type="text" value="7.273"/>	+ <input type="text" value="1992.727"/>	= <input type="text" value="2000"/>
Option 4 Dilute 3 Medicated Feed Mix	<input type="text" value="21.821"/>	+ <input type="text" value="1978.179"/>	= <input type="text" value="2000"/>

*Choose the number of dilutions for a final mix option that is most accurate and practical.

Example 2.

The objective is to provide **0.5 mg/lb weight** of a medicated feed additive to **50 cows** weighing **1,200 pounds** that will be supplemented at **1 lb per cow**, daily. A total of 50 lbs feed will be mixed per feed batch.

The label of the medicated feed purchased indicates **50 grams (g)/lb** active ingredient.

Using a series of 3 dilutions at a 1:1 dilution rate, dilution 1 would have a concentration of 25 g/lb, dilution 2, 12.5 g/lb, and dilution 3, 6.25 g/lb.

The calculated concentration of medicated feed per batch is 600 mg/lb for each of the 4 blending options. Multiplying the medicated feed 600 mg/lb x 1 lb/animal daily feeding rate equals the target 600 mg/animal (1,200 lb weight x 0.5 mg/lb weight).

Blending option 1 would require 0.6 lb of the concentrated medicated feed added to 49.4 lb non-medicated feed to get to the final 50 lb batch size.

Blending option 4 would require 4.8 lb of the 3rd Dilution Level added to 45.2 lb feed to get to the final 50 lb batch size.

Dilute 1		Dilute 2		Dilute 3	
Amount of concentrated medicated feed	<input type="text" value="1"/> lb	Amount of DILUTE 1 Medicated Feed	<input type="text" value="1"/> lb	Amount of DILUTE 2 Medicated Feed	<input type="text" value="1"/> lb
Amount of non-medicated feed supplement for dilution	<input type="text" value="1"/> lb	Amount of non-medicated feed supplement for dilution	<input type="text" value="1"/> lb	Amount of non-medicated feed supplement for dilution	<input type="text" value="1"/> lb
Concentration of Final Dilute 1 Medicated Feed	<input type="text" value="25.000"/> g/lb	Concentration of Final Dilute 2 Medicated Feed	<input type="text" value="12.500"/> g/lb	Concentration of Final Dilute 3 Medicated Feed	<input type="text" value="6.250"/> g/lb
Total Amount Dilute 1	<input type="text" value="2"/> lbs	If the total amount of Dilute 1 is used to make Dilute 2, available Dilute 2 =	<input type="text" value="4.000"/> lbs	If the total amount of Dilute 1 is used to make Dilute 2 and the total amount of Dilute 2 used to make Dilute 3, available Dilute 3 =	<input type="text" value="8.000"/> lbs

Mixing Summary			
Calculated Concentration of Medicated Feed Per Batch	<input type="text" value="600.000"/>	mg/lb	
Quantity that would be needed per	<input type="text" value="50"/>	lb batch mix	

Mixed Feed Options	Medicated Feed Lbs.		Non-Medicated Feed Lbs.		Total Feed Lbs.
Option 1 Fully Concentrated Medicated Feed Article	<input type="text" value="0.600"/>	+	<input type="text" value="49.4"/>	=	<input type="text" value="50"/>
Option 2 Dilute 1 Medicated Feed Mix	<input type="text" value="1.200"/>	+	<input type="text" value="48.8"/>	=	<input type="text" value="50"/>
Option 3 Dilute 2 Medicated Feed Mix	<input type="text" value="2.400"/>	+	<input type="text" value="47.6"/>	=	<input type="text" value="50"/>
Option 4 Dilute 3 Medicated Feed Mix	<input type="text" value="4.800"/>	+	<input type="text" value="45.2"/>	=	<input type="text" value="50"/>

*Choose the number of dilutions for a final mix option that is most accurate and practical.
