

Pre-Feedlot Preparation Guidelines

The time period between the 1st and 2nd doses of vaccines should be considered. Manufacturer requirements on commercial vaccines indicate that vaccine doses are given 14 to 21 days apart for the greatest disease protection. Consult your veterinarian to determine best practices for your operation.

Vaccine product: The Arkansas Grass to Grid Feedout program allows the use of killed vaccine (KV) and modified live vaccines (MLV) with specific timing strategies for administration.

- Option 1: Branding & Weaning:** requires the use of two rounds of 5-way MLV respiratory vaccine (BVD 1& 2, IBR, PI3 and BRSV), requires the use of two rounds of at least a 7-way clostridial (blackleg) vaccine, and one dose of *M. haemolytica* / *P. multocida* (a.k.a Shipping Fever) given at weaning.
- Option 2: Preweaning and Weaning:** requires the use of two rounds of 5-way respiratory vaccine. The first dose at preweaning may be MLV or KV, with the second dose at weaning being MLV (required). Requires two rounds of at least a 7-way clostridial vaccine and one dose of *M. haemolytica* / *P. multocida* given at weaning.
- Option 3: Weaning and Postweaning:** Requires the use of two rounds of 5-way MLV respiratory vaccine, requires the use of at least a 7-way clostridial vaccine, and one dose of *M. haemolytica* / *P. multocida* given at weaning.

An injectable deworm at the time of booster shots is required. All animals must be weaned and bunk broke at least 45 days before shipping (60 days is better).

Must be steers or open heifers and de-horned (if applicable).

Arkansas Grass to Grid Feedout Approved Vaccines

For Use with Option 1, 2, or 3	Vaccines
<p>Respiratory vaccines (Modified-Live) MLV vaccines against IBR, BVD 1 & 2, PI#, BRSV **Each Require a Booster**</p>	<p>Aspen TiterVac 5 Aspen TiterVac10 HB Express 5 Express FP5 Express FP10 Pyramid 5 Pyramid 5 + Prereponse Pyramid 10 Titanium 5 Titanium 5 + PH-M Vista 5 SQ Vista Once SQ Bovi-Shield GOLD 5 Bovi-Shield GOLD One Shot</p>
