

ARKANSAS PRODUCE SAFETY

Microbial Water Quality Profile (MWQP): Water Testing Labs for Arkansas Growers

Many farms must test their agricultural water sources in order to comply with the Food Safety Modernization Act (FSMA) Produce Safety Rule (PSR). **On the following page is a list of laboratories that conduct water testing in accordance with the FDA requirements** and that are conveniently located for Arkansas growers. **Additional lab locations can be found at the [US Water Testing Lab Map](#) webpage and on our fact sheet, [Bacterial Water Sample Collection and Submission to a Water Quality Lab for Compliance with the Food Safety Modernization Act's Produce Safety Rule](#). Make sure that the lab uses [FDA FSMA PSR alternative methods](#) which are also found in [Microbial Water Quality Profile \(MWQP\): Alternative Laboratory Methods](#).**

Make sure to request the method that provides numerical results (in CFU/100 mL or MPN/100 mL) for the analysis of your production water used during the growing season for activities such as irrigation, fertigation, foliar sprays, and frost protection.
