Update No. 3

General	By Chad Norton and Chris Elkins. Field conditions continue to remain wet and has made getting fertilizer application difficult. Drainage continues to be the biggest challenge. However, the mild winter has allowed for earlier growth. Disease and insect pressure remain low and is not expected to increase until average temperatures increase.		
County	Variety	Feekes Stage	General Information
Ashley	AGRIMAXX 473	2	Received over 10” rain since beginning of the year and looks it. Waiting to get some dryer soil conditions before first fertilizer application. Hoping to apply 100 lbs. DAP + 125 lbs. urea soon.
Lawrence	Dixie Brown	2	Field has good drainage, growth has remained slow. Recommended 50lbs Ammonium Sulfate plus 100lbs Urea.
