Update**

January 31, 2020

Update No. 2

General	By Chad Norton and Chris Elkins. Winter temperatures have been mild across most of the state but continuous rains have been challenging for wheat producers. Plant growth remains slow throughout the state. As temperatures start to increase and we find breaks in the rain we will start to look for opportunities for nitrogen applications.		
County	Variety	Feekes Stage	General Information
Ashley	AGRIMAXX 473	2	Looking pretty rough coming out of winter with all the rainfall. Very slow growth.
Lawrence	Dixie Brown	2	Field has good drainage and held up well during winter rains, growth has been slow as expected, weed pressure remains low. Still a few weeks away from 1 st spring Fertilizer application.
