## The Marley Discovery Farm in NW Arkansas: Protecting Water Resources Through Conservation on a Poultry-Beef Grazing Farm Virtual Field Trip

[www.uaex.uada.edu/soywhatsup](http://www.uaex.uada.edu/soywhatsup)

By Diedre Young, Soybean Science Challenge Coordinator

## The Marley Discovery Farm in NW Arkansas: Protecting Water Resources Through Conservation on a Poultry-Beef Grazing Farm

Grades 9-12 Integrated Chemistry, Environmental Science, Physics and Agricultural Science

Arkansas NGSS Suggestions:

*Chemistry:*

Topic One: Matter and Chemical Reactions:

**CI-ESS2-5: Plan and conduct an investigation of the properties of water and its effects on Earth materials and surface processes.**

*Science and Engineering Practices:* Planning and Carrying Out Investigations (CI-ESS2-5)

*Crosscutting Concepts:* Structure and Function (CI-ESS2-5)

*Disciplinary Core Ideas:* ESS2.C: The roles of water in Earth's Surface Processes (CI-ESS2-5)

*Connections to the Arkansas Disciplinary Literacy Standards:* WHST.9-12.7

1 Protecting Water Resources Through Conservation on a Poultry-Beef Grazing Farm VFT: Teacher Lesson Plan

*Connections to the Arkansas Mathematic Standards: HSN.Q.A.3*

**CI1-ETS1-2: Design a solution to a complex real-world problem by breaking it down into smaller, more manageable problems that can be solved through engineering**

*Science and Engineering Practices: Constructing Explanations and Designing Solutions (CI1-ETS1-2)*

*Disciplinary Core Ideas: ETS1.C: Optimizing the Design Solution (CI1-ETS1-2)*

*Connections to the Arkansas Mathematic Standards: MP.4*

## ***Environmental Science:***

### **Topic One: Systems**

**EVS-ESS2-5: Plan and conduct an investigation of the properties of water and its effects on Earth materials and surface processes.**

*Science and Engineering Practices: Planning and Carrying Out Investigations (EVS-ESS2-5)*

*Crosscutting Concepts: Structure and Function (EVS-ESS2-5)*

*Disciplinary Core Ideas: ESS2.C The roles of water in Earth’s Surface Processes (EVS-ESS2-5)*

*Connections to the Arkansas Disciplinary Literacy Standards: WHST.9-12.7*

*Connections to the Arkansas Mathematic Standards: HSN.Q.A.3*

**EVS1-ETS1-1: Analyze a major global challenge to specify qualitative and quantitative criteria and constraints for solutions that account for societal needs and wants.**

*Science and Engineering Practices: Asking Questions and Defining Problems (EVS1-ETS1-1)*

*Crosscutting Concepts: Influence of Engineering, Technology and Science on Society and the Natural World (EVS1-ETS1-1)*

*Disciplinary Core Ideas: ETS1.A: Defining and Delimiting Engineering Problems (EVS1-ETS1-1)*

*Connections to the Arkansas Disciplinary Literacy Standards: RST.11-12.7, RST.11-12.8, RST.11-12.9*

*Connections to the Arkansas Mathematic Standards: MP.2, MP.4*

## Topic 4: Sustainability

**EVS-ESS3-2: Evaluate competing design solutions for developing, managing and utilizing energy and mineral resources based on cost-benefit ratios.**

*Science and Engineering Practices:* Engage an Argument from Evidence (EVS-ESS3-2)

*Crosscutting Concepts:* Influence of Science, Engineering and Technology on Society and the Natural World. Science Addresses Questions about the Natural and Material World (EVS-ESS3-2).

*Disciplinary Core Ideas:* ESS3.A: Natural Resources. ETS1.B: Developing Possible Solutions (EVS-ESS3-2)

*Connections to the Arkansas Disciplinary Literacy Standards:* RST.11-12.8

*Connections to the Arkansas Mathematic Standards:* MP.2

**EVS-LS2-7: Design, evaluate and refine a solution for reducing the impacts of human activities on the environment and biodiversity.**

*Science and Engineering Practices:* Constructing Explanations and Designing Solutions (EVS-LS2-7)

*Crosscutting Concepts:* Stability and Change (EVS-LS2-7)

*Disciplinary Core Ideas:* LS2.C: Ecosystem Dynamics, Functioning, and Resilience, ESS3.A: Natural Resources, ESS3.C: Human Impacts on Earth Systems, ETS1.B: Developing Possible Solutions (EVS-LS2-7)

*Connections to the Arkansas Disciplinary Literacy Standards:* RST.9-10.8, RST.11-12.1, RST.11-12.8, WHST.9-12.7

*Connections to the Arkansas Mathematic Standards:* MP.2, HSN.Q.A.1, HSN.Q.A.2, HSN.Q.A.3

**EVS-LS4-6: Create or revise a simulation to test a solution to mitigate adverse impacts of human activity on biodiversity.**

*Science and Engineering Practices:* Using Mathematics and Computational Thinking (EVS-LS4-6)

*Crosscutting Concepts:* Cause and Effect (EVS-LS4-6)

*Disciplinary Core Ideas:* LS4.C: Adaptation, LS4.D: Biodiversity and Humans, ETS1.B: Developing Possible Solutions (EVS-LS4-6)

*Connections to the Arkansas Disciplinary Literacy Standards:* WHST.9-12.5, WHST.9-12.7

**EVS4-ETS1-3: Evaluate a solution to a complex real-world problem based on prioritized criteria and tradeoffs that account for a range of constraints, including cost, safety, reliability, and aesthetics as well as possible social, cultural, and environmental impacts.**

*Science and Engineering Practices:* Using Mathematics and Computational Thinking (EVS-ESS3-3)

*Crosscutting Concepts:* Cause and Effect (EVS-LS4-6), Stability and Change (EVS-ESS3-3), Systems and System Models (EVS-ESS3-6)

*Disciplinary Core Ideas:* ETS1.B: Developing Possible Solutions (EVS-LS4-6)

*Connections to the Arkansas Mathematic Standards:* MP.2

## **Physics:**

### **Topic 1: Motion**

**P-PS1-1AR: Create a model of motion and forces, including vectors graphed on the coordinate plane, to describe and predict the behavior of a system.**

*Science and Engineering Practices:* Developing and Using Models (P-PS1-1AR), Using Mathematics and Computational Thinking (P-PS1-2AR)

*Crosscutting Concepts:* System and System Models (P-PS1-1AR)

*Disciplinary Core Ideas:* PS2.A: Forces and Motion

*Connections to the Arkansas Disciplinary Literacy Standards:* RST.9-10.7

*Connections to the Arkansas English Language Arts Standards:* SL.11-12.2

*Connections to the Arkansas Mathematic Standards:* HSN.VM.A.1, HSN.VM.B.4

**P1-ETS1-2: Design a solution to a complex real-world problem by breaking it down into smaller, more manageable problems that can be solved through engineering.**

*Science and Engineering Practices:* Constructing Explanations and Designing Solutions (P1-ETS1-2)

*Crosscutting Concepts:* Interdependence of Science and Technology (P1-ETS1-2)

*Disciplinary Core Ideas:* PS2.A: Forces and Motion, ETS1.C: Optimizing the Design Solution

*Connections to the English Language Arts Standards: SL.11-12.2*

*Connections to the Arkansas Mathematic Standards: MP.2, HSN.VM.A.3*

## **Topic 2: Work and Energy**

**P-PS2-5AR: Use mathematical representations to support the claim that the change in kinetic energy of a system is equal to the net work performed upon the system.**

*Science and Engineering Practices: Using mathematics and computational thinking (P-PS2-5AR)*

*Crosscutting Concepts: Energy and Matter (P-PS2-5AR)*

*Disciplinary Core Ideas: PS3.C: Relationship between energy and forces*

*Connections to the English Language Arts Standards: SL.11-12.4*

*Connections to the Arkansas Mathematic Standards: MP.2, MP.4, HSN.Q.A.1-3, HSF.IF.C.7*

**Objective:** Students will understand the importance of watershed protection with regard to conservation of water, and the lessening of the environmental impact contaminated runoff water will have on the local ecosystem and watershed. Students will understand the science behind the checking of runoff water for water chemistries.

**Assessment:** Students will write a reflection paper on what they learned about watershed protection and conservation and waterway testing in *The Marley Discovery Farm in NW Arkansas: Protecting Water Resources Through Conservation on a Poultry-Beef Grazing Farm Virtual Field Trip* video.

**Key Points:** Watershed management, grassed waterways, aerated pastures, farm pond, water chemistries

## Materials:

- You will need to register online if you plan to watch the field trip 'live' on June 23. Once you have registered, (you will receive a registration link via Constant Contact. If you do not have a link, email [dyoung@uada.edu](mailto:dyoung@uada.edu) and one will be emailed to you. If you register during the live feed, you will be automatically directed to the site) you will receive an automated email with the link to the live feed and a reminder email with a link one hour before the VFT begins.
- If you plan to watch the recorded *Marley Discovery Farm in NW Arkansas: Protecting Water Resources Through Conservation on a Poultry-Beef Grazing Farm Virtual Field Trip*, go to [www.uaex.uada.edu/soywhatsup](http://www.uaex.uada.edu/soywhatsup) and click on the 'teacher curriculum' icon on the left hand side of the page. This will take you to the link for the video.
- Paper writing utensils for students.

## Preparation:

It is highly recommended that you, the teacher, watch *The History of Discovery Farms* Virtual Field Trip located on the *soywhatsup* website, before watching the *Marley Discovery Farm in NW Arkansas: Protecting Water Resources Through Conservation on a Poultry-Beef Grazing Farm* VFT as it will give you a strong understanding about how and why Discovery Farms work in Arkansas. This will provide background when explaining the *Marley Discovery Farm* VFT video to your students. It is also recommended you become familiar with the vocabulary.

No other significant preparation is necessary.

## Time Duration: 1-2 class periods

The video is about 45 minutes long. Assume about 15 minutes for students to look up vocabulary and prepare questions for the video session, 15 minutes to teach essential concepts and about 15 minutes for group discussion and reflection after the video.

## Elicit:

Do a KWL Chart about manure and runoff water. How do livestock farmers deal with runoff? How do farmers measure irrigation water to prevent waste? Get students thinking about the drawbacks of runoff by asking students how do farmers deal with livestock manure? Where does the manure runoff go? Considering the properties of water and the interaction water has on the environment, how could this excess manure runoff impact our ecosystem? What could farmers do to prevent this water from entering our local watersheds? How can farmers measure these excess contaminants?

## Engage:

Tell the students that they are going to watch a video titled *'The Marley Discovery Farm in NW Arkansas: Protecting Water Resources Through Conservation on a Poultry-Beef Grazing Farm.* Before they start the video, have the students break into groups to define the following word groups:

- Watersheds
- Aerated pastures
- Grassed waterways
- Farm ponds
- Eutrophication
- Hypoxia
- Nitrates in water
- Phosphates in water
- Water Quality Analysis; focus on nitrogen, phosphates, pH, sediments and solids in water

Once all the words are defined, have each group come up with two questions they have about the above word groups that may be answered in the video. ***Their jobs are to turn in the questions and the answers by the end of the virtual field trip.\****

\*The live video stream will give your students an opportunity to ask questions throughout the field trip. If they are not finding their questions adequately answered during the broadcast, you can send in their questions to be answered at the end of the video.

## Explain:

**BEFORE THE VIDEO** be sure the students understand that watershed water is a precious commodity as it is what local communities use for their drinking water. This water needs to be protected and any contaminated runoff needs to be curtailed before reaching it. Local waterways also need to be protected as ultimately that water ends up in the Gulf of Mexico, where excess nutrients lead to eutrophication and hypoxia in the gulf.

*If you are in chemistry*, this is a good time to discuss the water cycle, the properties of water, the structure and function of the dipole molecule and its impact on systems around it. Also discuss the chemistries of water and water testing.

# SOIL&WATER CONSERVATION VIRTUAL FIELD TRIP SERIES

---

*Environmental Science concepts* could involve ecosystem dynamics, natural resources, human impact and the role of water in surrounding systems, and water testing.

*Physics teachers:* This video covers the physics of flow involving volume, height, pressure flow and velocity of water. It also discusses the velocity of particulates in a water stream. Consider developing some problems beforehand for your students to work on after the video.

## **Explore:**

Farmers have to be constantly aware of how their farms may impact local watersheds and waterways, and the need to be proactive to protect them from contaminated runoff.

Show the video *The Marley Discovery Farm in NW Arkansas: Protecting Water Resources Through Conservation on a Poultry-Beef Grazing Farm*.

## **Elaborate:**

After the video, break the students into three groups; the *Aerated Pasture* Group, the *Grassed Waterways* group and the *Farm Ponds* group. Have each group brainstorm how their 'area of study' affects their daily lives. Tell students they need to come up with at least five ways and then report them to the rest of the class.

## **Evaluate:**

Students will turn in a two-paragraph reflection paper on what they learned and how these conservation efforts affect their personal lives and the answers to their two questions from the video.

## **Extend:**

End the lesson with how conservation practices of farmers also have a huge impact on our personal lives through the water we use and the food we eat.

Assign a brainstorming project that allows students to design their own ways of keeping manure tainted runoff from entering local watersheds.

Have an extension agent or local farmer come to your classroom and talk about irrigation of crops in your local community.

## CONSERVATION VIRTUAL FIELD TRIP SERIES

UofA DIVISION OF AGRICULTURE  
RESEARCH & EXTENSION  
University of Arkansas System

USDA United States Department of Agriculture  
Natural Resources Conservation Service

### 3D-Student Science Performance

*Author: Diedre Young, Soybean Science Challenge Coordinator*

**Grade: 9-12 Integrated Chemistry,  
Environmental Science, Physics and  
Agricultural Science**

**Lesson Topics:**

**Water conservation in Farming**

**Soil Filtration**

**Cycling of Matter**

**Water Chemistries**

**Watershed Protection**

**The Marley Discovery Farm in NW Arkansas:  
Protecting Water Resources Through  
Conservation on a Poultry-Beef Grazing Farm**

**Performance Expectations (Standard) from State Standards or NGSS:**

**Chemistry:**

**Topic One: Matter and Chemical Reactions:**

**CI-ESS2-5: Plan and conduct an investigation of the properties of water and its effects on Earth materials and surface processes.** [Clarification Statement: Emphasis on mechanical and chemical investigations with water and a variety of solid materials to provide the evidence for connections between the hydrologic cycle and system interactions commonly known as the rock cycle. Examples of mechanical investigations include stream transportation and deposition using a stream table, erosion using variations in soil moisture content, or frost wedging by the expansion of water as it freezes. Examples of chemical investigations include chemical weathering and recrystallization (by testing the solubility of different materials) or melt generation (by examining how water lowers the melting temperature of most solids.)]

**CI1-ETS1-2: Design a solution to a complex real-world problem by breaking it down into smaller, more manageable problems that can be solved through engineering.** [AR Clarification Statement: Examples of real-world problems could include wastewater treatment, production of biofuels, and the impact of heavy metals or phosphate pollutants on the environment.]

*Connections to the Arkansas Disciplinary Literacy Standards:*

WHST.9-12.7: Integrate and evaluate multiple sources of information presented in diverse formats and media in order to address a question or solve a problem.

*Connections to the Arkansas Mathematic Standards:*

HSN.Q.A.3: Choose a level of accuracy appropriate to limitations on measuring when reporting.

MP.4: Model with mathematics.

***Environmental Science:***

**Topic One: Systems**

**EVS-ESS2-5: Plan and conduct an investigation of the properties of water and its effects on Earth materials and surface processes.** [Clarification Statement: Emphasis on mechanical and chemical investigations with water and a variety of solid materials to provide the evidence for connections between the hydrologic cycle and system interactions commonly known as the rock cycle. Examples of mechanical investigations include stream transportation and deposition using a stream table, erosion using variations in soil moisture content, or frost wedging by the expansion of water as it freezes. Examples of chemical investigations include chemical weathering and recrystallization (by testing the solubility of different materials) or melt generation (by examining how water lowers the melting temperature of most solids.)

**EVS1-ETS1-1: Analyze a major global challenge to specify qualitative and quantitative criteria and constraints for solutions that account for societal needs and wants.** [AR Clarification Statement: Qualitative and quantitative constraints can be used to analyze a major global challenge. Examples could include water quality with relation to biosphere, atmosphere, cryosphere and geosphere.]

**Topic 4: Sustainability**

**EVS-ESS3-2: Evaluate competing design solutions for developing, managing and utilizing energy and mineral resources based on cost-benefit ratios.** [AR Clarification Statement: Emphasis is on conservation, sustainability, (e.g., recycling and reuse of resources), and minimizing impacts (e.g., Low Impact Design).]

**EVS-ESS3-4: Evaluate or refine a technological solution that reduces impacts of human activities on natural systems.** [AR Clarification Statement: Examples of data on the impacts of human activities could include the sequencing of traffic lights, adding lanes to main traffic arteries, docking and dredging of waterways, transportation of goods to market, use of drones, and use of alternate energies.]

**EVS-LS2-7: Design, evaluate and refine a solution for reducing the impacts of human activities on the environment and biodiversity.** [AR Clarification Statement: Emphasis in this course is on Arkansas-specific solutions. Examples of human activities can include land use (agriculture, forestry, recreation, industry); sustainable and non-sustainable practices) crop rotations, eradication of invasive species); and solution resources may include Low Impact Design (LID) or bioremediation (Faulkner County, AR; Gulf of Mexico hypoxia zone.)]

**EVS-LS4-6: Create or revise a simulation to test a solution to mitigate adverse impacts of human activity on biodiversity.** [AR Clarification Statement: Emphasis is on designing solutions for a proposed problem (e.g., micro-bead pollution, invasive species, effects of sedimentation on the Arkansas Fatmucket, White-nose Syndrome affecting bat populations, and environmental pollution from hormones and antibiotics.)]

**EVS4-ETS1-3: Evaluate a solution to a complex real-world problem based on prioritized criteria and tradeoffs that account for a range of constraints, including cost, safety, reliability, and aesthetics as well as possible social, cultural, and environmental impacts.** [AR Clarification Statement: Modeling complex real-world problems using computer software could include simulating future population growth in terms of limited resources or evaluating water flow through different Earth and geoenvironmental materials.]

*Connections to the Arkansas Disciplinary Literacy Standards:*

WHST.9-12.7: Integrate and evaluate multiple sources of information presented in diverse formats and media in order to address a question or solve a problem.

RST.11-12.7: Integrate and evaluate multiple sources of information presented in diverse formats and media in order to address a question or solve a problem.

RST.11-12.8: Evaluate the hypotheses, data, analysis, and or conclusions in a science or technical text, verifying the data when possible and corroborating or challenging conclusion with other sources of information.

RST.11-12.9: Synthesize information from a range of sources into a coherent understanding of a process, phenomenon or concept, resolving conflicting information when possible.

RST.9-10.8: Assess the extent to which the reasoning and evidence in a text support the author's claim or a recommendation for solving a scientific or technical problem.

RST.11-12.1: Cite specific textual evidence to support analysis of science and technical texts, attending to important distinctions the author makes and to any gaps or inconsistencies in the account.

WHST.9-12.7: Conduct short and well as more sustained research projects to answer a question or solve a problem; narrow or broaden the inquiry when appropriate; synthesize multiple sources on the subject, demonstrating understanding of the subject under investigation.

WHST.9-12.5: Develop and strengthen writing as needed by planning, revising, editing, rewriting, or trying a new approach, focusing on addressing what is most significant for a specific purpose and audience.

*Connections to the Arkansas Mathematic Standards:*

HSN.Q.A.3: Choose a level of accuracy appropriate to limitations on measuring when reporting.

MP.2: Reason abstractly and quantitatively.

MP.4: Model with mathematics.

HSN.Q.A.1: Use units as a way to understand problems and to guide the solution of multi-step problems; choose and interpret units consistently in formulas; choose and interpret the scale and the origin in graphs and data displays.

HSN.Q.A.2: Define appropriate quantities for the purpose of descriptive modeling.

**Physics:**

## **Topic 1: Motion**

**P-PS1-1AR: Create a model of motion and forces, including vectors graphed on the coordinate plane, to describe and predict the behavior of a system. [Clarification Statement: Emphasis is on vector addition for 1-D (frame of reference), 2-D motion (projectile, rotational motion), vectors applied to force diagrams, and vector direction for gravitational forces.]**

**P1-ETS1-2: Design a solution to a complex real-world problem by breaking it down into smaller, more manageable problems that can be solved through engineering. [AR Clarification Statement: Problems could include acceleration factors (one-dimensional motion), vectors (two dimensional motion), and gravity (Newton's laws).]**

## Topic 2: Work and Energy

**P-PS2-5AR: Use mathematical representations to support the claim that the change in kinetic energy of a system is equal to the net work performed upon the system. [Clarification Statement: Emphasis is on quantitative kinetic energy in interactions.]**

*Connections to the Arkansas Disciplinary Literacy Standards:*

RST.9-10.7: Translate quantitative or technical information expressed in words in a text into visual form (e.g., a table or chart) and translate information expressed visually or mathematically (e.g., in an equation) into words.

RST.11-12.1: Cite specific textual evidence to support analysis of science and technical texts, attending to important distinctions the author makes and to any gaps or inconsistencies in the account.

RST.11-12.7: Integrate and evaluate multiple sources of information presented in diverse formats and media (e.g.: quantitative data, video, multimedia) in order to address a question or solve a problem.

WHST.9-12.9: Synthesize information from a range of sources (e.g., texts, experiments, simulations) into a coherent understanding of a process phenomenon, or concept, resolving conflicting information when possible.

*Connections to the Arkansas English Language Arts Standards:*

SL.11-12.2: Integrate multiple sources of information that is gained by means other than reading (e.g., texts read out loud, oral presentations or charts, graphs, diagrams, speeches) in order to make informed decisions and solve problems, evaluating the credibility and accuracy of each source and noting any discrepancies among the data.

SL.11-12.4: present information, findings, and supporting evidence, conveying a clear and distinct perspective, such that listeners can follow the line of reasoning, alternative or opposing perspectives are addressed, and the organization, development, substance, and style are appropriate to purpose, audience, and a range of formal and informal tasks.

*Connections to the Arkansas Mathematic Standards:*

MP.2: Reason abstractly and quantitatively.

MP.4: Model with mathematics.

HSN.Q.A.1: Use units as a way to understand problems and to guide the solution of multi-step problems; choose and interpret units consistently in formulas; choose and interpret the scale and the origin in graphs and data displays.

HSN.Q.A.2: Define appropriate quantities for the purpose of descriptive modeling.

HSN.Q.A.3: Choose a level of accuracy, appropriate to limitations on measurement when reporting quantities.

HSN.VM.A.1: Recognize vector quantities as having both magnitude and direction; represent vector quantities by directed line segments and use appropriate symbols for vectors and their magnitudes.

HSA.SSE.B.3: Choose and produce an equivalent form of expression to reveal and explain properties of the quantity represented by the expression.

HSA.CED.A.3: Represent and interpret constraints by equations or inequalities, and by systems of equations and/or inequalities.

HSA.CED.A.4: Rearrange literal equations using the properties of equality.

HSF.IF.C.7: Graph functions expressed algebraically and show key features of the graph, with and without technology; graph linear and quadratic functions and, when applicable, show intercepts, maxima, and minima; graph square root, cube root, and piecewise-defined functions, including step functions and absolute value functions; graph polynomial functions, identifying zeros when suitable factorizations are available, and showing end behavior; graph rational functions, identifying zeros and asymptotes when suitable factorizations are available, and showing end behavior; graph exponential and logarithmic functions, showing intercepts and end behavior, graph trigonometric functions, showing period, midline, and amplitude.

### Lesson Performance Expectations:

- **Students will understand the importance of water conservation in farming.**
- **Students will understand the importance of filtration of runoff before it reaches local waterways.**
- **Students will understand the importance of water chemistry testing of runoff.**
- **Students will understand how water conservation through filtration of runoff impacts their lives.**

**Objective:** Students will understand the importance of

### Student Science Performance

*Phenomenon: Conventional farm runoff has a high potential of contaminating local watersheds and waterways. New filtration techniques in farming improve runoff water quality and protect the local watersheds and waterways from contamination.*

watershed protection with regard to conservation of water, and the lessening of the environmental impact contaminated runoff water will have on the local ecosystem and watershed. Students will understand the science behind the checking of runoff water for water chemistries.

**Assessment:**

Students will write a reflection paper on what they learned about watershed protection and conservation and waterway testing in *The Marley Discovery Farm in NW Arkansas: Protecting Water Resources Through Conservation on a Poultry-Beef Grazing Farm Virtual Field Trip*

**Gather:**

1. Students break into groups to define the following word groups:

- Watersheds
- Aerated pastures
- Grassed waterways
- Farm ponds
- Eutrophication
- Water hypoxia
- Phosphorous contamination in water
- Nitrogen contamination in water
- Water Quality Analysis; focus on nitrates, phosphates, pH, Sediments and Solids in water.

*(Teaching Suggestions: This section should contain a brief overview of information teachers will need to facilitate the lesson - this may include links to video clips, links to readings, crosscutting concepts and core ideas to emphasize safety advice and other insights about the gathering portion of the lesson. When materials for the investigation are needed, we recommend that you include them in the appendix.)*

**Reason:**

2. Students in groups will come up with two questions they have about the above word groups that may be answered in the video.

**Class Discussion:**

*Questions to initiate Discussion:*

*Q: How do farmers deal with water runoff from livestock farms?*

*Q: Where does that water go?*

*Q: Is this an issue in Arkansas and, if so, why?*

*Q: Considering the properties of water and the interaction water has on the environment, how could this excess manure runoff affect our ecosystem?*

*Q: What could farmers do to prevent this contaminated runoff from getting into our local waterways and watersheds?*

*Q: How can farmers measure these excess contaminants?*

**Teaching Suggestion:**

Do a KWL Chart about manure and runoff water. How do livestock farmers deal with runoff? How do farmers measure irrigation water to prevent waste? Get students thinking about the drawbacks of runoff by asking students how do farmers deal with

*Poultry-Beef  
Grazing Farm.*

Before they start the video, have the students break into groups to define the following word groups:

- Watersheds
- Aerated pastures
- Grassed waterways
- Farm ponds
- Eutrophication
- Hypoxia
- Nitrates in water
- Phosphates in water
- Water Quality Analysis; focus on nitrogen, phosphates, pH, sediments and solids in water.

Once all the words are defined, have each group come up with two questions they have about the

above word groups that may be answered in the video. ***Their jobs are to turn in the questions and the answers by the end of the virtual field trip.\****

\*The live video stream will give your students an opportunity to ask questions throughout the field trip. If they are not finding their questions adequately answered during the broadcast, you can send in their questions to be answered at the end of the video.

**Explain:**

***BEFORE THE VIDEO*** be sure the students understand that watershed water is a precious commodity as it is what local communities use for their drinking

water. This water needs to be protected and any contaminated runoff needs to be curtailed before reaching it. Local waterways also need to be protected as ultimately that water ends up in the Gulf of Mexico, where excess nutrients lead to eutrophication and hypoxia in the gulf.

*If you are in chemistry, this is a good time to discuss the water cycle, the properties of water, the structure and function of the dipole molecule and its impact on systems around it. Also discuss the chemistries of water and water testing.*

*Environmental Science concepts could involve ecosystem dynamics, natural*

resources, human impact and the role of water in surrounding systems, and water testing.

*Physics teachers:*

This video covers the physics of flow involving volume, height, pressure flow and velocity of water. It also discusses the velocity of particulates in a water stream.

Consider developing some problems beforehand for your students to work on after the video.

**Explore:**

Farmers have to be constantly aware of how their farms may impact local watersheds and waterways, and the need to be proactive to protect them from contaminated runoff.

Show the video *The*

*Marley Discovery  
Farm in NW  
Arkansas:  
Protecting Water  
Resources Through  
Conservation on a  
Poultry-Beef  
Grazing Farm.*

**Elaborate:**

After the video, break the students into three groups; the *Aerated Pasture* Group, the *Grassed Waterways* group and the *Farm Ponds* group. Have each group brainstorm how their 'area of study' affects their daily lives. Tell students they need to come up with at least five ways and then report them to the rest of the class.

**Evaluate:**

Students will turn in a two-paragraph reflection paper on what they learned and how these conservation efforts affect their personal lives and the answers to their

two questions from the video.

**Extend:**

End the lesson with how conservation practices of farmers also have a huge impact on our personal lives through the water we use and the food we eat.

Assign a brainstorming project that allows students to design their own ways of keeping manure tainted runoff from entering local watersheds.

Have an extension agent or local farmer come to your classroom and talk about irrigation of crops in your local community.

## Formative Assessment for Student Learning

**Elicit Evidence of Learning:** *This box is the individual communication performance from the student prompts in Appendix A*

Evidence of Student Proficiency	Range of Typical Student Responses	Acting on Evidence of Learning
<p><i>Students will understand the importance of filtration of runoff with regard to conservation of water and how filtering runoff is good for local watersheds and waterways. Students will understand that these innovative techniques involve not only filtration of livestock water runoff but also checking the chemistries of this water to monitor contaminants.</i></p>	<p><i>This section provides a range of typical student responses, often using a three-point scale.</i></p> <p><i>Descriptors of grade-level appropriate student responses:</i></p> <ul style="list-style-type: none"> <li>● <b>Full understanding:</b> <i>Student will have all the vocabulary defined, two questions for the video and will participate fully in the post video discussion, coming up with five different ways their area of study affects their daily lives. Reflection paper will show full connection between what they experienced and understand.</i></li> <li>● <b>Partial understanding:</b> <i>Student will have 75% of the vocabulary defined, one question for the video and an average of three ways from the post video group. Reflection paper will only show partial connection between what they experienced and understand.</i></li> <li>● <b>Limited understanding:</b> <i>Student will have 50% or less of vocabulary defined, no questions for the video and show no understanding of what was learned in the post group or reflection paper.</i></li> </ul>	<p><i>This is a brief description of the instructional actions to take based on the students' performance. When the action includes extensive descriptors and/or materials you may wish use <b>Appendix C.</b></i></p> <p><i>Description of instruction action and response to support student learning.</i></p> <ul style="list-style-type: none"> <li>● <i>Action for student who displays partial or limited understanding: student will be partnered with a student who has full understanding and material will be reviewed with mentoring from the teaching student.</i></li> <li>● <i>Extensions of learning for student who displays full understanding: Assign a brainstorming project that allows students to design their own alternate filtration method.</i></li> </ul>

<i>SEP, CCC, DCI Featured in Lesson</i>	<b>Science Essentials</b> ( <i>Student Performance Expectations From Appendix C, D, E</i> )
<b>Science Practices</b>	<ul style="list-style-type: none"> <li>• Plan and conduct an investigation individually and collaboratively to produce data to serve as the basis for evidence, and in the design: decide on types, how much, and accuracy of data needed to produce reliable measurements and consider limitations on the precision of the data and refine the design accordingly.</li> <li>• Design a solution to a complex real-world problem, based on scientific knowledge, student-generated sources of evidence, prioritized criteria, and trade-off considerations.</li> <li>• Analyze complex real world-problems by specifying criteria and constraints for successful solutions.</li> <li>• Evaluate competing design solutions to a real-world problem based on scientific ideas and principles, empirical evidence, and logical arguments regarding relevant factors.</li> <li>• Create a computational model or simulation of a phenomenon, designed device, process, or system.</li> <li>• Use mathematical representations of phenomena to support claims.</li> <li>• Use a model to predict the relationships between systems or between components of a system.</li> <li>• Analyze data using tools, technologies, and/or models in order to make valid and reliable scientific claims or determine an optimal design solution.</li> </ul>

expansion of some species, the emergence of new distinct species as populations diverge under different conditions, and the decline-and sometimes the extinction of some species.

- Momentum is defined for a particular frame of reference; it is the mass times the velocity of the object.
- When two objects interacting through a force field change relative position, the energy stored in the force field is changed.
- Mathematical expressions, which quantify how the stored energy in a system depends on its configuration and how kinetic energy depends on mass and speed, allow the concept conservation of energy to be used to predict and describe system behavior.
- Criteria may need to be broken down into simpler ones that can be approached systematically, and decisions about the priority of certain criteria over others (trade-offs) may be needed.

*Appendices: This section contains the lesson performance that students will see during the lesson and any other resources students will use to engage in the science performances. The appendices may also contain examples of student work.*

## Appendix A - Student Prompts

### Student Prompts for the Lesson

**Phenomenon: Conventional farm runoff has a high potential of contaminating local watersheds and waterways. New filtration techniques in farming improve runoff water quality and protect the local watersheds and waterways from contamination.**

#### **Group Performances:**

1. **Ask questions to plan an investigation** for understanding that farm water runoff filtration can preserve local watersheds and protect local waterways by prevention of contamination.
2. **Plan an investigation** by defining the necessary words and having questions ready for the video.
3. **Construct an explanation** by forming groups and discussing how farm water filtration can affect a person's everyday life.
4. **Use a model to** explain how the filtration of farm water runoff can preserve local watersheds

and protect the local ecology.

### ***Class Discussion***

#### ***Individual Performances:***

5. **Develop an argument** for how farm water filtration can and does help our local watersheds and waterways.

*The student prompt can be used to engage students in science performances and typically have 3-5 group performances and one individual performance. The individual performance typically lies within the communicate reasoning part of the sequence and often serves as a formal formative assessment. Often teachers add opportunities for class discussion into the instructional sequence to discuss things like “Good Questions to Find Resources” or “Class Debate” or “Discussion of Science Language Student Should Use”.*

### ***Appendix B –***

#### **Materials:**

- You will need to register online if you plan to watch the field trip ‘live’ on June 23. Once you have registered, you will receive a registration link via Constant Contact. If you do not have a link, email [dyoung@uada.edu](mailto:dyoung@uada.edu) and one will be emailed to you.  
If you register during the live feed, you will be automatically directed to the site. You will receive an automated email with the link to the live feed and a reminder email with a link one hour before the VFT begins.
- If you plan to watch the recorded *Marley Discovery Farm in NW Arkansas: Protecting Water Resources Through Conservation on a Poultry-Beef Grazing Farm* after June 23, go to [www.uaex.uada.edu/soywhatsup](http://www.uaex.uada.edu/soywhatsup) and click on the ‘teacher curriculum’ icon on the left hand side of the page. This will take you to the link for the video.
- Paper writing utensils for students.

## Preparation:

It is highly recommended that you, the teacher, watch *The History of Discovery Farms Virtual Field Trip* located on the *soywhatsup* website, before watching the *Marley Discovery Farm in NW Arkansas: Protecting Water Resources Through Conservation on a Poultry-Beef Grazing Farm Virtual Field Trip* as it will give you a strong understanding about how and why Discovery Farms work in Arkansas. This will provide background when explaining the *Marley Discovery Farm* video to your students. It is also recommended you familiarize yourself with the vocabulary.

No other significant preparation is necessary.

## Time Duration: two class periods

The video is about 60 minutes long (45 minutes plus any questions). Assume about 15 minutes for students to look up vocabulary and prepare questions for the video session, 15 minutes to teach essential concepts and about 15 minutes for group discussion and reflection after the video.

**Appendix C** - This is a good place to put descriptions and resources for “acting on evidence of learning” from the Formative “Assessment for Student Learning”. Typically, this is an additional reading with class discussion questions or other resources students use to meet the learning expectation.

## Free Educational Resources and Materials Available from the Soybean Science Challenge at [www.uaex.uada.edu/soywhatsup](http://www.uaex.uada.edu/soywhatsup)

The Arkansas Soybean Science Challenge is a science enrichment program open to students in grades 6-12.

### The Arkansas Soybean Science Challenge research program includes:

- \$300 cash awards for high school student science projects impacting sustainability at Arkansas regional science fairs and Arkansas FFA Agriscience Fair; \$1000 first place, \$500 second place and \$250 Honorable Mention at the Arkansas state science fair.
- \$200 cash awards for junior high (6-8th grade) student science projects impacting sustainability at Arkansas regional science fairs and Arkansas FFA Agriscience Fair.
- \$200 cash awards to teachers whose students win the Soybean Science Challenge at regional. Teacher awards at state are \$300 for first place, \$200 for second place and \$100 for Honorable Mention. \$100 for junior level Soybean Science Challenge teacher awardees at regional.

### STUDENT ONLINE COURSE – 6 MODULES

- The Science of Soybean Production
- The Miracle Bean: Food
- The Miracle Bean: Fuel
- The Miracle Bean: Feed
- The Faces & Challenges of Farming: Emerging Issues
- Ready...Set...Research!

**6-12th grade students** who successfully complete the Soybean Science Challenge online course and enter a soybean related project in one of the Arkansas regional and state science fairs, and FFA Agriscience Fair are eligible to have their projects judged for cash awards.

For more information about the Soybean Science Challenge Program, contact:  
**Dr. Julie Robinson** ([jrobinson@uada.edu](mailto:jrobinson@uada.edu))  
**Diedre Young** ([dyoung@uada.edu](mailto:dyoung@uada.edu))  
Phone 501-671-2086

The University of Arkansas System Division of Agriculture is an equal opportunity/equal access/affirmative action institution. If you require a reasonable accommodation to participate or need materials in another format, please contact one of the numbers above as soon as possible. Dial 711 for Arkansas Relay.

### FREE CLASSROOM RESOURCES

#### Teacher In-Service Online Course

*7 Hours ADE Approved – 6 Modules*

*1 Hour ADE Approved: Science Fair 101*

#### Teacher Resources Course for Classroom Use

*6 Modules, Tests, Answer Keys and over 50 other soybean-related articles and resources*

#### Teacher Classroom Lessons in 7E & GRC-3D (NGSS Aligned) Format covering multiple subjects.

**5-10-minute NGSS aligned agriculturally based mini-lesson videos for the virtual and face to face classroom.** Video lessons cover a multitude of subjects with accessible Power Points.
