By Diedre Young, Soybean Science Challenge

**Stevens Cotton Discovery Farm Virtual Field Trip**

**Grades 9-12 Integrated Chemistry, Environmental Science, Physics and  
Agricultural Science**

**Arkansas NGSS Suggestions:**

***Chemistry:***

**Topic One: Matter and Chemical Reactions:**

**CL-ESS2-5: Plan and conduct an investigation of the properties of water and its effects on Earth materials and surface processes.**

*Science and Engineering Practices: Planning and Carrying Out Investigations (CL-ESS2-5)*

*Crosscutting Concepts: Structure and Function (CL-ESS2-5)*

*Disciplinary Core Ideas: ESS2.C: The roles of water in Earth's Surface Processes (CL-ESS2-5)*

---

### **1 Stevens Cotton Discovery Farm VFT: Teacher Lesson Plan**

*Connections to the Arkansas Disciplinary Literacy Standards: WHST.9-12.7*

*Connections to the Arkansas Mathematic Standards: HSN.Q.A.3*

**CI1-ETS1-2: Design a solution to a complex real-world problem by breaking it down into smaller, more manageable problems that can be solved through engineering.**

*Science and Engineering Practices: Constructing Explanations and Designing Solutions (CI1-ETS1-2)*

*Disciplinary Core Ideas: ETS1.C: Optimizing the Design Solution (CI1-ETS1-2)*

*Connections to the Arkansas Mathematic Standards: MP.4*

## ***Environmental Science:***

### **Topic One: Systems**

**EVS-ESS2-5: Plan and conduct an investigation of the properties of water and its effects on Earth materials and surface processes.**

*Science and Engineering Practices: Planning and Carrying Out Investigations (EVS-ESS2-5)*

*Crosscutting Concepts: Structure and Function (EVS-ESS2-5)*

*Disciplinary Core Ideas: ESS2.C The roles of water in Earth's Surface Processes (EVS-ESS2-5)*

*Connections to the Arkansas Disciplinary Literacy Standards: WHST.9-12.7*

*Connections to the Arkansas Mathematic Standards: HSN.Q.A.3*

**EVS1-ETS1-1: Analyze a major global challenge to specify qualitative and quantitative criteria and constraints for solutions that account for societal needs and wants.**

*Science and Engineering Practices: Asking Questions and Defining Problems (EVS1-ETS1-1)*

*Crosscutting Concepts: Influence of Engineering, Technology and Science on Society and the Natural World (EVS1-ETS1-1)*

*Disciplinary Core Ideas: ETS1.A: Defining and Delimiting Engineering Problems (EVS1-ETS1-1)*

*Connections to the Arkansas Disciplinary Literacy Standards: RST.11-12.7, RST.11-12.8, RST.11-12.9*

---

## **2 Stevens Cotton Discovery Farm VFT: Teacher Lesson Plan**

*Connections to the Arkansas Mathematic Standards: MP.2, MP.4*

## **Topic 4: Sustainability**

**EVS-ESS3-2: Evaluate competing design solutions for developing, managing and utilizing energy and mineral resources based on cost-benefit ratios.**

*Science and Engineering Practices: Engage an Argument from Evidence (EVS-ESS3-2)*

*Crosscutting Concepts: Influence of Science, Engineering and Technology on Society and the Natural World. Science Addresses Questions about the Natural and Material World. (EVS-ESS3-2).*

*Disciplinary Core Ideas: ESS3.A: Natural Resources. ETS1.B: Developing Possible Solutions (EVS-ESS3-2)*

*Connections to the Arkansas Disciplinary Literacy Standards: RST.11-12.8*

*Connections to the Arkansas Mathematic Standards: MP.2*

**EVS-LS2-7: Design, evaluate and refine a solution for reducing the impacts of human activities on the environment and biodiversity.**

*Science and Engineering Practices: Constructing Explanations and Designing Solutions (EVS-LS2-7)*

*Crosscutting Concepts: Stability and Change (EVS-LS2-7)*

*Disciplinary Core Ideas: LS2.C: Ecosystem Dynamics, Functioning, and Resilience, ESS3.A: Natural Resources, ESS3.C: Human Impacts on Earth Systems, ETS1.B: Developing Possible Solutions. (EVS-LS2-7)*

*Connections to the Arkansas Disciplinary Literacy Standards: RST.9-10.8, RST.11-12.1, RST.11-12.8, WHST.9-12.7*

*Connections to the Arkansas Mathematic Standards: MP.2, HSN.Q.A.1, HSN.Q.A.2, HSN.Q.A.3*

**EVS-LS4-6: Create or revise a simulation to test a solution to mitigate adverse impacts of human activity on biodiversity.**

*Science and Engineering Practices: Using Mathematics and Computational Thinking (EVS-LS4-6)*

*Crosscutting Concepts: Cause and Effect (EVS-LS4-6)*

---

## **3 Stevens Cotton Discovery Farm VFT: Teacher Lesson Plan**

*Disciplinary Core Ideas:* LS4.C: Adaptation, LS4.D: Biodiversity and Humans, ETS1.B: Developing Possible Solutions (EVS-LS4-6)

*Connections to the Arkansas Disciplinary Literacy Standards:* WHST.9-12.5, WHST.9-12.7

**EVS4-ETS1-3: Evaluate a solution to a complex real-world problem based on prioritized criteria and trade-offs that account for a range of constraints, including cost, safety, reliability, and aesthetics as well as possible social, cultural, and environmental impacts.**

*Science and Engineering Practices:* Using Mathematics and Computational Thinking (EVS-ESS3-3)

*Crosscutting Concepts:* Cause and Effect (EVS-LS4-6), Stability and Change (EVS-ESS3-3), Systems and System Models (EVS-ESS3-6)

*Disciplinary Core Ideas:* ETS1.B: Developing Possible Solutions (EVS-LS4-6)

*Connections to the Arkansas Mathematic Standards:* MP.2

**Physics:**

**Topic 1: Motion**

**P-PS1-1AR: Create a model of motion and forces, including vectors graphed on the coordinate plane, to describe and predict the behavior of a system.**

*Science and Engineering Practices:* Developing and Using Models (P-PS1-1AR), Using Mathematics and Computational Thinking (P-PS1-2AR)

*Crosscutting Concepts:* System and System Models (P-PS1-1AR)

*Disciplinary Core Ideas:* PS2.A: Forces and Motion

*Connections to the Arkansas Disciplinary Literacy Standards:* RST.9-10.7

*Connections to the Arkansas English Language Arts Standards:* SL.11-12.2

*Connections to the Arkansas Mathematic Standards:* HSN.VM.A.1, HSN.VM.B.4

**P-PS2-1: Analyze data to support the claim that Newton’s second law of motion describes the mathematical relationship among the net force on a macroscopic object, its mass, and its acceleration.**

---

## **4 Stevens Cotton Discovery Farm VFT: Teacher Lesson Plan**

*Science and Engineering Practices: Analyzing and Interpreting Data (P-PS2-1)*

*Crosscutting Concepts: Structure and Function (P-PS2-1)*

*Disciplinary Core Ideas: PS2.A: Forces and Motion*

*Connections to the Arkansas Disciplinary Literacy Standards: RST.11-12.1, RST.11-12.7, WHST.9-12.9*

*Connections to the Arkansas Mathematic Standards: MP.2, MP.4, HSN.Q.A.1-3, HSN.VM.A.1,3, HSN.VM.B.4, HSA.SSE.B.3*

**P1-ETS1-2: Design a solution to a complex real-world problem by breaking it down into smaller, more manageable problems that can be solved through engineering.**

*Science and Engineering Practices: Constructing Explanations and Designing Solutions (P1-ETS1-2)*

*Crosscutting Concepts: Interdependence of Science and Technology (P1-ETS1-2)*

*Disciplinary Core Ideas: PS2.A: Forces and Motion, ETS1.C: Optimizing the Design Solution*

*Connections to the English Language Arts Standards: SL.11-12.2*

*Connections to the Arkansas Mathematic Standards: MP.2, HSN.VM.A.3*

## **Topic 2: Work and Energy**

**P-PS2-5AR: Use mathematical representations to support the claim that the change in kinetic energy of a system is equal to the net work performed upon the system.**

*Science and Engineering Practices: Using mathematics and computational thinking (P-PS2-5AR)*

*Crosscutting Concepts: Energy and Matter (P-PS2-5AR)*

*Disciplinary Core Ideas: PS3.C: Relationship between energy and forces*

*Connections to the English Language Arts Standards: SL.11-12.4*

*Connections to the Arkansas Mathematic Standards: MP.2, MP.4, HSN.Q.A.1-3, HSF.IF.C.7*

## Topic 3: Heat and Thermodynamics

**P-PS3-3AR: Use mathematical representations to model the conservation of energy in fluids.**

*Science and Engineering Practices:* Using mathematics and computational thinking (P-PS3-3AR)

*Crosscutting Concepts:* Energy and Matter (P-PS3-3AR)

*Disciplinary Core Ideas:* PS3.B: Conservation of Energy and Energy Transfer

*Connections to the Arkansas Mathematic Standards:* MP.2, MP.4, HSN.Q.A.1-3, HSA.CED.A.3, HSA.CED.A.4

**Objective:** Students will understand the importance of irrigation watering with regard to conservation of water, and the lessening of the environmental impact contaminated runoff water will have on the local ecosystem. Students will understand the science behind the checking of irrigation water level usage and water chemistries.

**Assessment:** Students will write a reflection paper on what they learned about irrigation conservation and testing in the Stevens Discovery Farm Virtual Field Trip video.

**Key Points:** Conservation Tillage Management, cover crops, Flowlink computer program, water flow pacing, water runoff chemistries.

### Materials:

- You will need to register online if you plan to watch the field trip 'live' on August 21. Once you have registered, (you will receive a registration link via Constant Contact. If you do not have a link, email [dyoung@uaex.edu](mailto:dyoung@uaex.edu) and one will be emailed to you. If you register during the live feed, you will be automatically directed to the site) you will receive an automated email with the link to the live feed and a reminder email with a link one hour before the VFT begins.
- If you plan to watch the recorded *Stevens Cotton Discovery Farm Field Trip*, go to [www.uaex.edu/soywhatsup](http://www.uaex.edu/soywhatsup) and click on the 'teacher curriculum' icon on the left hand side of the page. This will take you to the link for the video.
- Paper writing utensils for students.

## **Preparation:**

It is highly recommended that you, the teacher, watch *The History of Discovery Farms* Virtual Field Trip before the *Stevens Cotton Discovery Farm* VFT as it will give you a strong understanding about how and why Discovery Farms work in Arkansas. This will provide background when explaining the *Stevens Cotton* video to your students.

No other significant preparation is necessary.

## **Time Duration: 1-2 class periods**

The video is about 45 minutes long. Assume about 15 minutes for students to look up vocabulary and prepare questions for the video session, 15 minutes to teach essential concepts and about 15 minutes for group discussion and reflection after the video.

## **Elicit:**

Do a KWL Chart about irrigation and runoff water. How do farmers water their crops? How do farmers measure irrigation water to prevent waste? Get students thinking about the drawbacks of irrigation runoff by asking students how do farmers keep plants healthy (fertilizers) and do they think all the fertilizer that is placed on the field goes into the plant? If not, where does the excess fertilizer go? Considering the properties of water and the interaction water has on the environment, how could this excess fertilizer impact our ecosystem? How can farmers measure this excess and what can they do to prevent this?

## **Engage:**

Tell the students that they are going to watch a video titled '*Stevens Cotton Discovery Farm Virtual Field Trip*.' Before they start the video, have the students break into groups to define the following word groups:

- Conservation Tillage Management
- Conventional Tillage
- Conservation Tillage (no tillage)
- Poly-Pipe tubing furrow irrigation
- Cover Cropping
- Water Flow pacing
- Hydrologist
- Hypoxic Zone
- Flowlink Computer Program

# SOIL&WATER CONSERVATION VIRTUAL FIELD TRIP

---

- Watermark Granular Matrix Sensors
- Nitrates in water
- Nitrites in water
- Ammonia in water
- Water Quality Analysis; focus on salts, pH, Salinity, Sediments and Solids in water

Once all the words are defined, have each group come up with two questions they have about the above word groups that may be answered in the video. ***Their jobs are to turn in the questions and the answers by the end of the virtual field trip.\****

\*The live video stream will give your students an opportunity to ask questions throughout the field trip. If they are not finding their questions adequately answered during the broadcast, you can send in their questions to be answered at the end of the video.

## **Explain:**

**BEFORE THE VIDEO** be sure the students understand that irrigation water is a precious commodity both economically and ecologically. Water that is getting to the plant roots isn't becoming runoff and isn't taking fertilizer with it.

If you are in chemistry, this is a good time to discuss the water cycle, the properties of water, the structure and function of the dipole molecule and its impact on systems around it.

Environmental Science concepts could involve ecosystem dynamics, natural resources, human impact and the role of water in surrounding systems.

Physics teachers: This video covers the physics of flow (open and closed channel) involving diameter of pipes, volume, height, pressure flow and velocity of water. It also discusses the velocity of particulates in a water stream. Consider developing some problems beforehand for your students to work on after the video.

## **Explore:**

Farmers have to be constantly aware of the amount of water they use to irrigate their crops. Water availability has dropped in recent years so farmers are always looking for ways to conserve; lower water usage means less cost, better sustainability and less contaminated water runoff.

Show the video *Stevens Discovery Farm Virtual Field Trip*.

---

## **8 Stevens Cotton Discovery Farm VFT: Teacher Lesson Plan**

# SOIL & WATER CONSERVATION VIRTUAL FIELD TRIP

## Elaborate:

After the video, break the students into three groups; the *Measurement of Water Flow* Group, the *Conservation Tillage of Furrow* group and the *Water Quality Analysis* group. Have each group brainstorm how their 'area of study' affects their daily lives. Tell students they need to come up with at least five ways and then report them to the rest of the class.

## Evaluate:

Students will turn in a two-paragraph reflection paper on what they learned and how these conservation efforts affect their personal lives and the answers to their two questions from the video.

## Extend:

End the lesson with how conservation practices of farmers also have a huge impact on our personal lives through the water we use and the food we eat.

Assign a brainstorming project that allows students to design their own alternate irrigation method, runoff water chemistry testing protocols or calculate flow based on different pipe and water diameters.

Have an extension agent or local farmer come to your classroom and talk about irrigation of crops in your local community.

The University of Arkansas System Division of Agriculture offers all its Extension and Research programs and services without regard to race, color, sex, gender identity, sexual orientation, national origin, religion, age, disability, marital or veteran status, genetic information, or any other legally protected status, and is an Affirmative Action/Equal Opportunity Employer.

### 3D-Student Science Performance

*Author: Diedre Young, Soybean Science Challenge*

**Grades: 9-12 Integrated Chemistry, Environmental Science, Physics and Agricultural Science**

#### Lesson Topic:

- Water Quality
- Water Flow Monitoring
- Water Conservation in Farming
- Water Ecology
- Essential Chemistries in Irrigation Water

**Stevens Cotton Discovery Farm**

**Virtual Field Trip**

#### Performance Expectations (Standard) from State Standards or NGSS:

##### *Chemistry:*

##### Topic One: Matter and Chemical Reactions:

**CI-ESS2-5: Plan and conduct an investigation of the properties of water and its effects on Earth materials and surface processes.** [Clarification Statement: Emphasis on mechanical and chemical investigations with water and a variety of solid materials to provide the evidence for connections between the hydrologic cycle and system interactions commonly known as the rock cycle. Examples of mechanical investigations include stream transportation and deposition using a stream table, erosion using variations in soil moisture content, or frost wedging by the expansion of water as it freezes. Examples of chemical investigations include chemical weathering and recrystallization (by testing the solubility of different

## 1 Stevens Cotton Discovery Farm VFT: Teacher Lesson Plan

materials) or melt generation (by examining how water lowers the melting temperature of most solids.)

**CI1-ETS1-2: Design a solution to a complex real-world problem by breaking it down into smaller, more manageable problems that can be solved through engineering.** [AR Clarification Statement: Examples of real-world problems could include wastewater treatment, production of biofuels, and the impact of heavy metals or phosphate pollutants on the environment.]

*Connections to the Arkansas Disciplinary Literacy Standards:*

WHST.9-12.7: Integrate and evaluate multiple sources of information presented in diverse formats and media in order to address a question or solve a problem.

*Connections to the Arkansas Mathematic Standards:*

HSN.Q.A.3: Choose a level of accuracy appropriate to limitations on measuring when reporting.

MP.4: Model with mathematics.

***Environmental Science:***

**Topic One: Systems**

**EVS-ESS2-5: Plan and conduct an investigation of the properties of water and its effects on Earth materials and surface processes.** [Clarification Statement: Emphasis on mechanical and chemical investigations with water and a variety of solid materials to provide the evidence for connections between the hydrologic cycle and system interactions commonly known as the rock cycle. Examples of mechanical investigations include stream transportation and deposition using a stream table, erosion using variations in soil moisture content, or frost wedging by the expansion of water as it freezes. Examples of chemical investigations include chemical weathering and recrystallization (by testing the solubility of different materials) or melt generation (by examining how water lowers the melting temperature of most solids.)

**EVS1-ETS1-1: Analyze a major global challenge to specify qualitative and quantitative criteria and constraints for solutions that account for societal needs and wants.** [AR Clarification Statement: Qualitative and quantitative constraints can be used to analyze a major global challenge. Examples could include water quality with relation to biosphere, atmosphere, cryosphere and geosphere.]

**Topic 4: Sustainability**

**EVS-ESS3-2: Evaluate competing design solutions for developing, managing and utilizing energy and mineral resources based on cost-benefit ratios.** [AR Clarification Statement: Emphasis is on conservation, sustainability, (e.g., recycling and reuse of resources), and minimizing impacts (e.g., Low Impact Design).]

**EVS-ESS3-4: Evaluate or refine a technological solution that reduces impacts of human activities on**

**natural systems.** [AR Clarification Statement: Examples of data on the impacts of human activities could include the sequencing of traffic lights, adding lanes to main traffic arteries, docking and dredging of waterways, transportation of goods to market, use of drones, and use of alternate energies.]

**EVS-LS2-7: Design, evaluate and refine a solution for reducing the impacts of human activities on the environment and biodiversity.** [AR Clarification Statement: Emphasis in this course is on Arkansas-specific solutions. Examples of human activities can include land use (agriculture, forestry, recreation, industry); sustainable and non-sustainable practices) crop rotations, eradication of invasive species); and solution resources may include Low Impact Design (LID) or bioremediation (Faulkner County, AR; Gulf of Mexico hypoxia zone.)]

**EVS-LS4-6: Create or revise a simulation to test a solution to mitigate adverse impacts of human activity on biodiversity.** [AR Clarification Statement: Emphasis is on designing solutions for a proposed problem (e.g., micro-bead pollution, invasive species, effects of sedimentation on the Arkansas Fatmucket, White-nose Syndrome affecting bat populations, and environmental pollution from hormones and antibiotics.)]

**EVS4-ETS1-3: Evaluate a solution to a complex real-world problem based on prioritized criteria and trade-offs that account for a range of constraints, including cost, safety, reliability, and aesthetics as well as possible social, cultural, and environmental impacts.** [AR Clarification Statement: Modeling complex real-world problems using computer software could include simulating future population growth in terms of limited resources or evaluating water flow through different Earth and geoenvironmental materials.]

*Connections to the Arkansas Disciplinary Literacy Standards:*

WHST.9-12.7: Integrate and evaluate multiple sources of information presented in diverse formats and media in order to address a question or solve a problem.

RST.11-12.7: Integrate and evaluate multiple sources of information presented in diverse formats and media in order to address a question or solve a problem.

RST.11-12.8: Evaluate the hypotheses, data, analysis, and/or conclusions in a science or technical text, verifying the data when possible and corroborating or challenging conclusion with other sources of information.

RST.11-12.9: Synthesize information from a range of sources into a coherent understanding of a process, phenomenon or concept, resolving conflicting information when possible.

RST.9-10.8: Assess the extent to which the reasoning and evidence in a text support the author's claim or a recommendation for solving a scientific or technical problem.

RST.11-12.1: Cite specific textual evidence to support analysis of science and technical texts, attending to important distinctions the author makes and to any gaps or inconsistencies in the account.

WHST.9-12.7: Conduct short and well as more sustained research projects to answer a question or solve a problem; narrow or broaden the inquiry when appropriate; synthesize multiple sources on the subject, demonstrating understanding of the subject under investigation.

WHST.9-12.5: Develop and strengthen writing as needed by planning, revising, editing, rewriting, or trying a new approach, focusing on addressing what is most significant for a specific purpose and audience.

*Connections to the Arkansas Mathematic Standards:*

HSN.Q.A.3: Choose a level of accuracy appropriate to limitations on measuring when reporting.

MP.2: Reason abstractly and quantitatively.

MP.4: Model with mathematics.

HSN.Q.A.1: Use units as a way to understand problems and to guide the solution of multi-step problems; choose and interpret units consistently in formulas; choose and interpret the scale and the origin in graphs and data displays.

HSN.Q.A.2: Define appropriate quantities for the purpose of descriptive modeling.

*Physics:*

## **Topic 1: Motion**

**P-PS1-1AR: Create a model of motion and forces, including vectors graphed on the coordinate plane, to describe and predict the behavior of a system.** [Clarification Statement: Emphasis is on vector addition for 1-D (frame of reference), 2D motion (projectile, rotational motion), vectors applied to force diagrams, and vector direction for gravitational forces.]

**P-PS2-1: Analyze data to support the claim that Newton's second law of motion describes the mathematical relationship among the net force on a macroscopic object, its mass, and its acceleration.** [Clarification Statement: Examples of data could include tables and graphs of position or velocity as functions of time for objects subject to a net unbalanced force (falling object, object rolling down a ramp, moving object being pulled by a constant force.)]

**P1-ETS1-2: Design a solution to a complex real-world problem by breaking it down into smaller, more manageable problems that can be solved through engineering.** [AR Clarification Statement: Problems could include acceleration factors (one-dimensional motion), vectors (two-dimensional motion), and gravity (Newton's laws).]

## **Topic 2: Work and Energy**

**P-PS2-5AR: Use mathematical representations to support the claim that the change in kinetic energy of a system is equal to the net work performed upon the system. [Clarification Statement: Emphasis is on quantitative kinetic energy in interactions.]**

### **Topic 3: Heat and Thermodynamics**

**P-PS3-3AR: Use mathematical representations to model the conservation of energy in fluids. [Clarification Statement: Emphasis is on fluid dynamics as expressed in Bernoulli's equation and Pascal's principle.]**

#### *Connections to the Arkansas Disciplinary Literacy Standards:*

RST.9-10.7: Translate quantitative or technical information expressed in words in a text into visual form (e.g., a table or chart) and translate information expressed visually or mathematically (e.g., in an equation) into words.

RST.11-12.1: Cite specific textual evidence to support analysis of science and technical texts, attending to important distinctions the author makes and to any gaps or inconsistencies in the account.

RST.11-12.7: Integrate and evaluate multiple sources of information presented in diverse formats and media (e.g.: quantitative data, video, multimedia) in order to address a question or solve a problem.

WHST.9-12.9: Synthesize information from a range of sources (e.g., texts, experiments, simulations) into a coherent understanding of a process phenomenon, or concept, resolving conflicting information when possible.

#### *Connections to the Arkansas English Language Arts Standards:*

SL.11-12.2: Integrate multiple sources of information that is gained by means other than reading (e.g., texts read out loud, oral presentations or charts, graphs, diagrams, speeches) in order to make informed decisions and solve problems, evaluating the credibility and accuracy of each source and noting any discrepancies among the data.

SL.11-12.4: present information, findings, and supporting evidence, conveying a clear and distinct perspective, such that listeners can follow the line of reasoning, alternative or opposing perspectives are addressed, and the organization, development, substance, and style are appropriate to purpose, audience, and a range of formal and informal tasks.

#### *Connections to the Arkansas Mathematic Standards:*

MP.2: Reason abstractly and quantitatively.

MP.4: Model with mathematics.

HSN.Q.A.1: Use units as a way to understand problems and to guide the solution of multi-step problems; choose and interpret units consistently in formulas; choose and interpret the scale and the origin in graphs and data displays.

HSN.Q.A.2: Define appropriate quantities for the purpose of descriptive modeling.

HSN.Q.A.3: Choose a level of accuracy, appropriate to limitations on measurement when reporting quantities.

HSN.VM.A.1: Recognize vector quantities as having both magnitude and direction; represent vector quantities by directed line segments, and use appropriate symbols for vectors and their magnitudes.

HSN.VM.A.3: Solve problems involving velocity and other quantities that can be represented by vectors.

HSN.VM.B.4: Add and subtract vectors: add vectors end-to-end, compound-wise, and by the parallelogram rule. Understand that the magnitude of a sum of two vectors is typically not the sum of the magnitudes; given two vectors in magnitude and direction form, determine the magnitude and direction of their sum; understand vector subtraction  $\mathbf{v}-\mathbf{w}$  as  $\mathbf{v}+(-\mathbf{w})$ , where  $-\mathbf{w}$  is the additive inverse of  $\mathbf{w}$ , with the same magnitude as  $\mathbf{w}$  and pointing in the opposite direction; represent vector subtraction graphically by connecting the tips in the appropriate order; perform vector subtraction component-wise.

HSA.SSE.B.3: Choose and produce an equivalent form of expression to reveal and explain properties of the quantity represented by the expression.

HSA.CED.A.3: Represent and interpret constraints by equations or inequalities, and by systems of equations and/or inequalities.

HSA.CED.A.4: Rearrange literal equations using the properties of equality.

HSF.IF.C.7: Graph functions expressed algebraically and show key features of the graph, with and without technology; graph linear and quadratic functions and, when applicable, show intercepts, maxima, and minima; graph square root, cube root, and piecewise-defined functions, including step functions and absolute value functions; graph polynomial functions, identifying zeros when suitable factorizations are available, and showing end behavior; graph rational functions, identifying zeros and asymptotes when suitable factorizations are available, and showing end behavior; graph exponential and logarithmic functions, showing intercepts and end behavior, graph trigonometric functions, showing period, midline, and amplitude.

#### **Lesson Performance Expectations:**

- **Students will understand the importance of irrigation conservation in farming.**
- **Students will understand the importance of water flow monitoring with regard to water ecology.**
- **Students will understand how irrigation water quality monitoring has a widespread impact.**
- **Students will understand how irrigation conservation impacts their lives through food and water usage.**

**Objective:** Students will understand the importance of irrigation watering with regard to conservation of water, and the lessening of the environmental impact contaminated runoff water will have on the local ecosystem. Students will understand the science behind the checking of irrigation water level usage and water chemistries.

**Assessment:** Students will write a reflection paper on what they learned about irrigation conservation and testing in the Stevens Discovery Farm Virtual Field Trip video.

**Key Points:** Conservation Tillage Management, cover crops, Flowlink computer program,

## Student Science Performance

**Phenomenon:** *Conventional irrigation and tillage leads to water loss and contaminated water runoff. Conservation irrigation and no-till farming has been shown through experimentation to decrease water loss and contaminated runoff.*

**Gather** (In this section students will generally be asking questions, obtaining information, planning and carrying out an investigation, using mathematical and computational thinking, or using models to gather and organize data and/or information.)

1. Students will break into groups to define the following word groups:

- Conservation Tillage Management
- Conventional Tillage
- Conservation Tillage (no tillage)
- Poly-Pipe tubing furrow irrigation
- Cover Cropping
- Water Flow pacing
- Hydrologist
- Hypoxic Zone
- Flowlink Computer Program
- Watermark Granular Matrix Sensors
- Nitrates in water
- Nitrites in water
- Ammonia in water
- Water Quality Analysis; focus on salts, pH, Salinity, Sediments and Solids in water

**Reason** (In this section students are generally: evaluating information, analyzing data, using mathematical/computational thinking, constructing explanations, developing arguments, and/or using models to reason, predict, and develop evidence.)

1. Students in groups will come up with two questions they have about the above word groups that may be answered in the video.

### **Class Discussion:**

Questions to initiate Discussion:

Q: How do farmers water their crops?

Q: How do farmers measure irrigation water to prevent waste?

Q: How do farmers keep plants healthy?

Q: Does all fertilizer placed on a field end up in a plant?

Q: Where does the excess fertilizer go?

Q: Considering the properties of water and the interaction water has on the environment, how could this excess fertilizer impact our ecosystem?

Q: How can farmers measure this excess and what can they do to prevent this?

# SOIL&WATER CONSERVATION VIRTUAL FIELD TRIP

water flow pacing,  
water runoff  
chemistries

## Materials:

- You will need to register online if you are planning on watching the field trip 'live' on August 21. Once you have registered, (you will receive a registration link via Constant Contact. If you do not have a link, email [dyoung@uax.edu](mailto:dyoung@uax.edu) and one will be emailed to you. If you register during the live feed, you will be automatically directed to the site) you will receive an automated

## Teaching suggestion:

Do a KWL Chart about irrigation and runoff water. How do farmers water their crops? How do farmers measure irrigation water to prevent waste? Get students thinking about the drawbacks of irrigation runoff by asking students how do farmers keep plants healthy (fertilizers) and do they think all the fertilizer that is placed on the field goes into the plant? If not, where does the excess fertilizer go? Considering the properties of water and the interaction water has on the environment, how could this excess fertilizer impact our ecosystem? How can farmers measure this excess and what can they do to prevent this?

Tell the students that they are going to watch a video titled 'Stevens Cotton Discovery Farm Virtual Field Trip.' Before they start the video, have the students break into groups to define the above words.

Once all the words are defined, have each group come up with two questions they have about the above word groups that may be answered in the video. ***Their jobs are to turn in the questions and the answers by the end of the virtual field trip.\****

\*The live video stream will give your students an opportunity to ask questions throughout the field trip. If they are not finding their questions adequately answered during the broadcast, you can send in their questions to be answered at the end of the video.

**BEFORE THE VIDEO** be sure the students understand that irrigation water is a precious commodity both economically and ecologically. Water that is getting to the plant roots isn't becoming runoff and isn't taking fertilizer with it.

If you are in chemistry, this is a good time to discuss the water cycle, the properties of water, the structure and function of the dipole molecule and its impact on systems around it.

Environmental Science concepts could involve ecosystem dynamics, natural resources, human impact and the role of water in surrounding systems.

Physics teachers: This video covers the physics of flow (open and closed channel) involving diameter of pipes, volume, height, pressure flow and velocity of water. It also discusses the velocity of particulates in a water stream. Consider working up some problems beforehand for your students to work on after the video.

email with the link to the live feed and a reminder email with a link one hour before the VFT begins.

- If you plan to watch the recorded Stevens Cotton Discovery Farm Field Trip, go to [www.uaex.edu/soywhatsup](http://www.uaex.edu/soywhatsup) and click on the 'teacher curriculum' icon on the left hand side of the page. This will take you to the link for the video.
- Paper writing utensils for students.

### Preparation:

It is highly recommended that you, the teacher,

**Communicate** (In this section students will be communicating information, communicating arguments (written and oral for how their evidence supports or refutes an explanation, and using models to communicate their reasoning and make their thinking visible.)

After the video, break the students into three groups; the *Measurement of Water Flow* Group, the *Conservation Tillage of Furrow* group and the *Water Quality Analysis* group. Have each group brainstorm how their 'area of study' affects their daily lives. Tell students they need to come up with at least five ways and then report them to the rest of the class.

Students will turn in a two-paragraph reflection paper on what they learned and how these conservation efforts affect their personal lives and the answers to their two questions from the video.

watch *The History of Discovery Farms Virtual Field Trip* before the *Stevens Cotton Discovery Farm VFT* as it will give you a strong understanding about how and why Discovery Farms work in Arkansas. This will provide background when explaining the *Stevens Cotton* video to your students.

No other significant preparation is necessary.

**Time Duration: 1-2 class periods**

The video is about 45 minutes long. Assume about 15 minutes for students to look up vocabulary and prepare questions for the video session, 15 minutes to teach essential concepts and about 15 minutes for group discussion and reflection after

the video.

**Elicit:**

Do a KWL Chart about irrigation and runoff water. How do farmers water their crops? How do farmers measure irrigation water to prevent waste? Get students thinking about the drawbacks of irrigation runoff by asking students how do farmers keep plants healthy (fertilizers) and do they think all the fertilizer that is placed on the field goes into the plant? If not, where does the excess fertilizer go? Considering the properties of water and the interaction water has on the environment, how could this excess fertilizer impact our ecosystem? How can farmers measure this excess and what can they do to prevent this?

**Engage:**

Tell the students that they are going to watch a video titled '*Stevens Cotton Discovery Farm Virtual Field Trip.*' Before they start the video, have the students break into groups to define the following word groups:

- Conservation Tillage Management
- Conventional Tillage
- Conservation Tillage (no tillage)
- Poly-Pipe tubing furrow irrigation
- Cover Cropping
- Water Flow pacing
- Hydrologist
- Hypoxic Zone
- Flowlink Computer Program
- Watermark Granular

Matrix

Sensors

- Nitrates in water
- Nitrites in water
- Ammonia in water
- Water Quality Analysis; focus on salts, pH, Salinity, Sediments and Solids in water

Once all the words are defined, have each group come up with two questions they have about the above word groups that may be answered in the video. ***Their jobs are to turn in the questions and the answers by the end of the virtual field trip.\****

\*The live video stream will give your students an opportunity to ask questions throughout the field trip. If they are not

finding their questions adequately answered during the broadcast, you can send in their questions to be answered at the end of the video.

**Explain:**

**BEFORE THE VIDEO** be sure the students understand that irrigation water is a precious commodity both economically and ecologically. Water that is getting to the plant roots isn't becoming runoff and isn't taking fertilizer with it.

If you are in chemistry, this is a good time to discuss the water cycle, the properties of water, the structure and function of the dipole molecule and its impact on systems around it.

Environmental Science concepts could involve ecosystem dynamics, natural resources, human impact and the role of water in surrounding systems.

Physics teachers: This video covers the physics of flow (open and closed channel) involving diameter of pipes, volume, height, pressure flow and velocity of water. It also discusses the velocity of particulates in a water stream. Consider developing some problems beforehand for your students to work on after the video.

**Explore:**

Farmers have to be constantly aware of the amount of water they use to irrigate their crops. Water availability has dropped in

recent years so farmers are always looking for ways to conserve; lower water usage means less cost, better sustainability and less contaminated water runoff.

Show the video *Stevens Discovery Farm Virtual Field Trip*.

**Elaborate:**

After the video, break the students into three groups; the *Measurement of Water Flow* Group, the *Conservation Tillage of Furrow* group and the *Water Quality Analysis* group. Have each group brainstorm how their 'area of study' affects their daily lives. Tell students they need to come up with at least five ways and then report them to the rest of the class.

**Evaluate:**

Students will turn

in a two-paragraph reflection paper on what they learned and how these conservation efforts affect their personal lives and the answers to their two questions from the video.

**Extend:**

End the lesson with how conservation practices of farmers also have a huge impact on our personal lives through the water we use and the food we eat.

Assign a brainstorming project that allows students to design their own alternate irrigation method, runoff water chemistry testing protocols or calculate flow based on different pipe and water diameters.

Have an extension agent or local

farmer come to your classroom and talk about irrigation of crops in your local community.

## Formative Assessment for Student Learning

**Elicit Evidence of Learning:** This box is the individual communication performance from the student prompts in Appendix A

### Evidence of Student Proficiency

Students will understand the importance of irrigation watering with regard to conservation of water and the lessening of the environmental impact contaminated runoff water will have on the local ecosystem. Students will understand that this takes constant monitoring and testing through computer applications, flow meters and water chemistries.

### Range of Typical Student Responses

This section provides a range of typical student responses, often using a three-point scale.

Descriptors of grade-level appropriate student responses:

- **Full understanding:** Student will have all the vocabulary defined, two questions for the video and will participate fully in the post video discussion, coming up with five different ways irrigation conservation impacts their personal lives. Reflection paper will show full connection between what they experienced and understand.
- **Partial understanding:** student will have 75% of the vocabulary defined, one question for the video and an average of three questions from the post video group. Reflection paper will only show partial connection between what they experienced and understand.
- **Limited understanding:** Student will have 50% or less of vocabulary defined, no questions for the video and show no understanding of what was learned in the reflection paper.

### Acting on Evidence of Learning

This is a brief description of the instructional actions to take based on the students' performance. When the action includes extensive descriptors and/or materials you may wish to use **Appendix C**.

Description of instruction action and response to support student learning.

- **Action for student who displays partial or limited understanding:** student will be partnered with a student who has full understanding and material will be reviewed with mentoring from the teaching student.
- **Extensions of learning for student who displays full understanding:** Assign a brainstorming project that allows students to design their own aquifer recharging project or alternate irrigation method.

*Appendices: This section contains the lesson performance that students will see during the lesson and any other resources students will use to engage in the science performances. The appendices may also contain examples of student work.*

## **Appendix A - Student Prompts**

### **Student Prompts for the Lesson**

**Phenomenon: Conventional irrigation and tillage leads to water loss and contaminated water runoff. Conservation Irrigation and no-till farming has been shown through experimentation to decrease water loss and contaminated runoff.**

#### **Group Performances:**

1. **Ask questions to plan an investigation** for understanding that conservation irrigation can decrease water loss and contaminated runoff.
2. **Plan an investigation** by defining the words necessary and having questions ready for the video.
3. **Construct an explanation** by forming groups and discussing how conservation irrigation can affect a person's everyday life.
4. **Use a model to** explain how the constant monitoring of water flow and testing of irrigation water runoff ultimately benefits both people and the ecosystem they live in.

#### **Class Discussion**

#### **Individual Performances:**

5. **Develop an argument** for how irrigation conservation can and does help our economy and ecology.

*The student prompt can be used to engage students in science performances and typically have 3-5 group performances and one individual performance. The individual performance typically lies within the communicate reasoning part of the sequence and often serves as a formal formative assessment. Often teachers add opportunities for class discussion into the instructional sequence to discuss things like "Good Questions to Find Resources" or "Class Debate" or "Discussion of Science Language Student Should Use."*

## *Appendix B -*

### **Materials:**

- You will need to register online if you are planning to watch the field trip 'live' on August 21. Once you have registered, (you will receive a registration link via Constant Contact. If you do not have a link, email [dyoung@uaex.edu](mailto:dyoung@uaex.edu) and one will be emailed to you. If you register during the live feed, you will be automatically directed to the site) you will receive an automated email with the link to the live feed and a reminder email with a link one hour before the VFT begins.
- If you plan to watch the recorded *Stevens Cotton Discovery Farm Field Trip*, go to [www.uaex.edu/soywhatsup](http://www.uaex.edu/soywhatsup) and click on the 'teacher curriculum' icon on the left hand side of the page. This will take you to the link for the video.
- Paper writing utensils for students.

### **Preparation:**

It is highly recommended that you, the teacher, watch *The History of Discovery Farms Virtual Field Trip* before the *Stevens Cotton Discovery Farm Virtual Field Trip* as it will give you a strong understanding about how and why Discovery Farms work in Arkansas. This will provide background when explaining the *Stevens Cotton* video to your students.

No other significant preparation is necessary.

### **Time Duration: 1-2 class periods**

The video is about 45 minutes long. Assume about 15 minutes for students to look up vocabulary and prepare questions for the video session, 15 minutes to teach essential concepts and about 15 minutes for group discussion and reflection after the video.

## Free Educational Resources and Materials Available from the Soybean Science Challenge at [www.uaex.edu/soywhatsup](http://www.uaex.edu/soywhatsup)

The Arkansas Soybean Science Challenge is a science enrichment program open to students in grades 9-12.

### The Arkansas Soybean Science Challenge research program includes:

- \$300 cash awards for high school student science projects impacting sustainability at Arkansas regional science fairs and Arkansas FFA Agriscience Fair; \$1000 first place, \$500 second place and \$250 Honorable Mention at the Arkansas state science fair.
- \$200 cash awards to teachers whose students win the Soybean Science Challenge at regional. Teacher awards at state are \$300 for first place, \$200 for second place and
- \$100 for Honorable Mention.

#### STUDENT ONLINE COURSE – 6 MODULES

- The Science of Soybean Production
- The Miracle Bean: Food
- The Miracle Bean: Fuel
- The Miracle Bean: Feed
- The Faces & Challenges of Farming: Emerging Issues
- Ready...Set...Research!

**9-12th grade students** who successfully complete the Soybean Science Challenge online course and enter a project in one of the Arkansas regional and state science fairs are eligible to have their projects judged for cash awards.

For more information about the Soybean Science Challenge Program, contact:
